## Bait Sewing Instructions

AN EASY AND NATURAL LOOK IN JUST 5 EASY STEPS

### Step 1:

Sew down through the right nostril and the bottom lip, leaving extra line. Repeat with the left nostril.

### Step 2:

Prick the skin with the sewing hook behind the gills where the black meets the silver on the bait. Insert the hook just under the skin and pull through.

### Step 3:

Leaving about an inch space, re-insert the hook under the skin leaving extra line between the two insertions.

### Step 4:

On the underside of the bait, insert the hook between the two pelvic fins and out the anus.

### Step 5:

Working your way back from the hook gently pull the excess line back through the bait tightening up the line as you go and finally cinching the line that runs through the nostrils.

\*If you wish for the bait to roll in the water, bend the fish while drawing the line back through.
